ARTCRAFT FLEET TECHNICAL BROCHURE · SERIES #24

ContractCraft v0.1.1

Contract templates, review workflow, redlines, a clause risk scan, tamper-evident seals and notice deadlines for a small Austrian business. One SQLite file, one binary that is both CLI and MCP server. Part of the back-office craft suite (replaces Word templates in a folder, ad-hoc review mails and the "when can we cancel this?" spreadsheet).

v0.1.1	3 Crates	4003	6-Gate
RELEASE VERSION	WORKSPACE TIERS	PURE-RUST LOC	ARTCRAFT VERIFIED

Repository: `D:\Dev\repos\contractcraft` · **Standard:** `CRAFT_BROCHURE_STANDARD.md` · **Compiled via:** `BookCraft v0.5.0`

Contract templates, review workflow, redlines, a clause risk scan, tamper-evident seals and notice deadlines for a small Austrian business. One SQLite file, one binary that is both CLI and MCP server. Part of the back-office craft suite (replaces Word templates in a folder, ad-hoc review mails and the "when can we cancel this?" spreadsheet).

Status: **v0.1.1, Tier 1** (store + CLI + MCP, tested). No desktop window yet. Synthetic demo data only. **Not legal advice**: the risk scan points a human reviewer at clauses, nothing more.

- How to use it day to day: HELP.md
- What it is for and where it stops: docs/PRD.md
- Every MCP tool: docs/TOOLS.md (generated, checked by a test)
- Changes: CHANGELOG.md

What it does

- **Templates** with declared variables (`{{kunde}}`, required/default). Placeholders and declarations must match; filling refuses typos, missing required values and leftover placeholders. Template edits create versions; contracts remember which version they came from.
- **Status machine:** draft -> under_review -> pending_signature -> executed -> terminated / expired (cancelled from any open state). Everything else is refused; every move is logged with actor and note.
- **Versions:** text changes only in draft and only as a new version. Versions and seals are immutable (SQLite triggers).
- **Redline:** line diff between versions plus the risk delta ("this edit adds unlimited liability").
- **Risk scan:** deterministic DE + EN rules in TOML: unlimited liability, Schad- und Klagloshaltung / indemnity, automatic renewal, venue or governing law outside Austria, personal data without AVV / DPA, penalties, unilateral changes, exclusivity. Bring your own rule file with `--rules`.
- **Seal:** SHA-256 of the exact text plus an Ed25519 signature over (number, version, hash, time). Executing a contract requires a seal of the current version. `verify` checks the stored text and, with `--file`, that an exported copy is byte-identical. This is tamper evidence, **not** a legally binding e-signature (no QES / ID Austria).
- **Render:** `md` (byte-identical to the sealed text), `typ` (Typst source), `pdf` via the Typst CLI. Without Typst the PDF verb fails with an install hint; no fake PDF.
- **Deadlines:** last notice day of auto-renewing contracts (month-end rule from craft-biz) or the end of a fixed term. `--emit` sends each deadline once to taskcraft (`contract.deadline` becomes an issue with a due date). Executing sends `contract.executed` to gaincraft.

Quick start

```
contractcraft demo-seed
contractcraft list
contractcraft show C-2026-001
contractcraft scan C-2026-002
contractcraft redline C-2026-003
contractcraft deadlines --days 60 --emit     # taskcraft inbox-drain picks them up
contractcraft draft "Wartung Kanzlei" "Mock & Partner OG" --template "Wartungsvertrag
(DEMO)" --set kunde="Mock & Partner OG" --set leistung="Wartung" --set entgelt="300,00
EUR" --set beginn=01.01.2027
contractcraft terms C-2026-004 --start 01.01.2027 --months 12 --renew 12 --notice 3 --
value "3.600,00"
contractcraft move C-2026-004 under_review
contractcraft seal C-2026-004
contractcraft render C-2026-001 D:\Temp\c1.md
contractcraft verify C-2026-001 --file D:\Temp\c1.md
```

Template variables on the CLI: `--var kunde!` (required), `--var ort=Wien` (default), `--var notiz` (optional).

Database: `--db PATH`, else `$CONTRACTCRAFT_DB`, else `%LOCALAPPDATA%\contractcraft\contractcraft.db`. Seal key: `--key`, else `seal.key` next to the database (created on first seal; keep it out of shared backups). Typst: `typst` on PATH or `CONTRACTCRAFT_TYPST`.

MCP

```
{ "mcpServers": { "contractcraft": { "command": "D:/Dev/cargo-
target/release/contractcraft.exe", "args": ["mcp", "--allow-path", "D:/Dev/contracts"]
} } }
```

17 tools, all `contract_*`; see docs/TOOLS.md. Agent actions are logged with actor `agent`.

Build

```
just ci
just build-release
```

Needs `../craft-biz` checked out next to this repo.

Not done (honest list)

- No egui desktop app.
- PDF only through the Typst CLI (not installed on Goliath yet). The md -> Typst converter knows headings, bullets and paragraphs; no tables or bold.
- No LLM review (planned via craft-ai-core, always labelled advisory).
- Seal key is a plain file, not Windows Credential Manager yet.
- No QES / ID Austria / A-Trust signatures; parties still sign outside the app.
- No word-level redline (line level only); no DOCX import.

Product Requirements & Architecture Specification

What it is

Contract templates, a review workflow, redlines, a deterministic clause risk scan, tamper-evident seals and notice deadlines for a small Austrian business. Pure Rust, ArtCraft pattern. Suite plan: `BACKOFFICE_CRAFT_SUITE.md`, section 4.5.

Users

- The owner who writes, reviews and keeps contracts and must not miss a notice deadline.
- Agents over MCP: draft from templates, scan risk, compare versions, watch deadlines. Agent actions are logged with actor `agent`.

Jobs

1. Produce contracts from vetted templates without placeholder mistakes.
2. See risky clauses and what an edit changed.
3. Prove later that a copy is exactly what was agreed.
4. Never miss a Kündigungsfrist.

Today (v0.1.0)

- Versioned templates with strict variables; drafts from templates or own text.
- Enforced status machine; text changes only in draft as new versions; versions and seals immutable by trigger; executing needs a seal.
- Risk scan: 9 default DE/EN rules, user TOML rules, disclaimer on every result; redline with risk delta.
- SHA-256 + Ed25519 seal and verify (also of exported files); md, Typst source and (with the Typst CLI) PDF output.
- Deadlines with the craft-biz month-end rule; `contract.deadline` -> taskcraft (verified end to end); `contract.executed` -> gaincraft.
- 17 MCP tools (TOOLS.md, generated and test-checked).

Boundaries

- No legal advice; the scan only points at clauses.
- No QES / ID Austria / A-Trust; the seal is tamper evidence, parties still sign.
- No fake output: PDF only through a real renderer.
- Wrap renderers (Typst, later WordCraft/PdfCraft), do not reimplement them.

Gaps (honest)

- No egui window.
- Typst not installed on Goliath yet, so PDF is untested end to end.
- md -> Typst converter knows headings, bullets and paragraphs only.
- Seal key is a plain file (Credential Manager planned).
- No LLM review, no word-level redline, no DOCX import.
- Rules not reviewed by a lawyer; synthetic data only.

Next

1. Install Typst; add a PDF test that runs when the CLI is present.
2. egui app: contract list, side-by-side redline with risk panel, deadline calendar.
3. Lawyer review of the rule set; rules for Gewährleistung waivers and payment terms.

Complete MCP Tool & CLI Verb Reference

Generated by `contractcraft tools --markdown`. Do not edit by hand: a test fails when this file

is out of date. Every tool is also a CLI verb (`contractcraft --help`). Dotted names (`app.verb`) are accepted.

Tool	What it does	Required	Optional
`contract_status`	Counts by status, templates, sealed contracts, whether the seal key exists.	-	-
`contract_template_add`	Add a template (or a new version of it). Placeholders {{name}} must match the declared variables exactly.	`name`	`body`, `body_path`, `description`, `variables`
`contract_template_list`	Templates (latest versions) with their variables.	-	-
`contract_template_show`	One template with body and variables.	`name`	`version`
`contract_draft`	Create a draft from a template (values fill its variables; typos and missing required values are errors) or from your own text. Returns a quick risk count.	`title`, `counterparty`	`body`, `body_path`, `template`, `values`
`contract_list`	Contracts with status, allowed next statuses and the next deadline.	-	`status`, `text`
`contract_show`	One contract: text (current or a version), versions, status history, seals, risk findings, next deadline.	`contract`	`as_of`, `version`
`contract_edit`	New text version (draft only). Returns the redline stats and risk delta.	`contract`	`body`, `body_path`, `note`
`contract_terms`	Term data for deadlines: start, initial_months, renewal_months (0 = fixed term), notice_months, annual_value. Fixed after execution.	`contract`	`annual_value`, `initial_months`, `notice_months`, `renewal_months`, `start`
`contract_transition`	Move along draft -> under_review -> pending_signature -> executed -> terminated/expired (cancelled from any open state). Executing needs a seal of the current version and sends contract.executed to gaincraft.	`contract`, `to`	`note`

Tool	What it does	Required	Optional
`contract_seal`	Seal the current version: SHA-256 of the text + Ed25519 signature. Tamper evidence, not a legal e-signature.	`contract`	-
`contract_verify`	Check all seals against the stored text; with path, check that a file is byte-identical to the sealed text.	`contract`	`path`
`contract_redline`	Line diff between two versions (default: previous vs current) plus which risk findings were added or removed.	`contract`	`from`, `to`
`contract_risk_scan`	Deterministic DE/EN clause scan (liability, indemnity, auto-renewal, foreign venue/law, missing DPA, penalties, unilateral changes, exclusivity). Optional TOML rule file. Not legal advice.	-	`contract`, `rules_path`, `text`, `version`
`contract_render`	Write the text as md (byte-identical to the sealed text), typ (Typst source) or pdf (needs the Typst CLI; fails clearly without it).	`contract`, `path`	`format`, `version`
`contract_deadlines`	Notice deadlines and term ends of executed contracts within N days (default 90). emit=true sends each once to taskcraft as contract.deadline.	-	`as_of`, `emit`, `within_days`
`contract_demo_seed`	Fill an EMPTY database with labelled demo templates and three contracts (executed, risky draft, renegotiated).	-	-
